WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

Dry and warm weather with high temperatures ranging from the [mid 60s to low 80s](#). Variable winds 5 to 15 mph.

Higher pressure but not warmer temperatures will return Tuesday and Wednesday. Even though it will be cooler, unseasonably warm afternoon temperatures will continue. A major change in weather pattern will begin Thursday as a low pressure system drops south along the British Columbia coast and eventually into the Pacific Northwest Friday. This is going to bring some widespread precipitation to the region late Friday into Saturday. After a short break between weather systems, another wet system may arrive next Sunday night and linger Monday, 11/06/17.

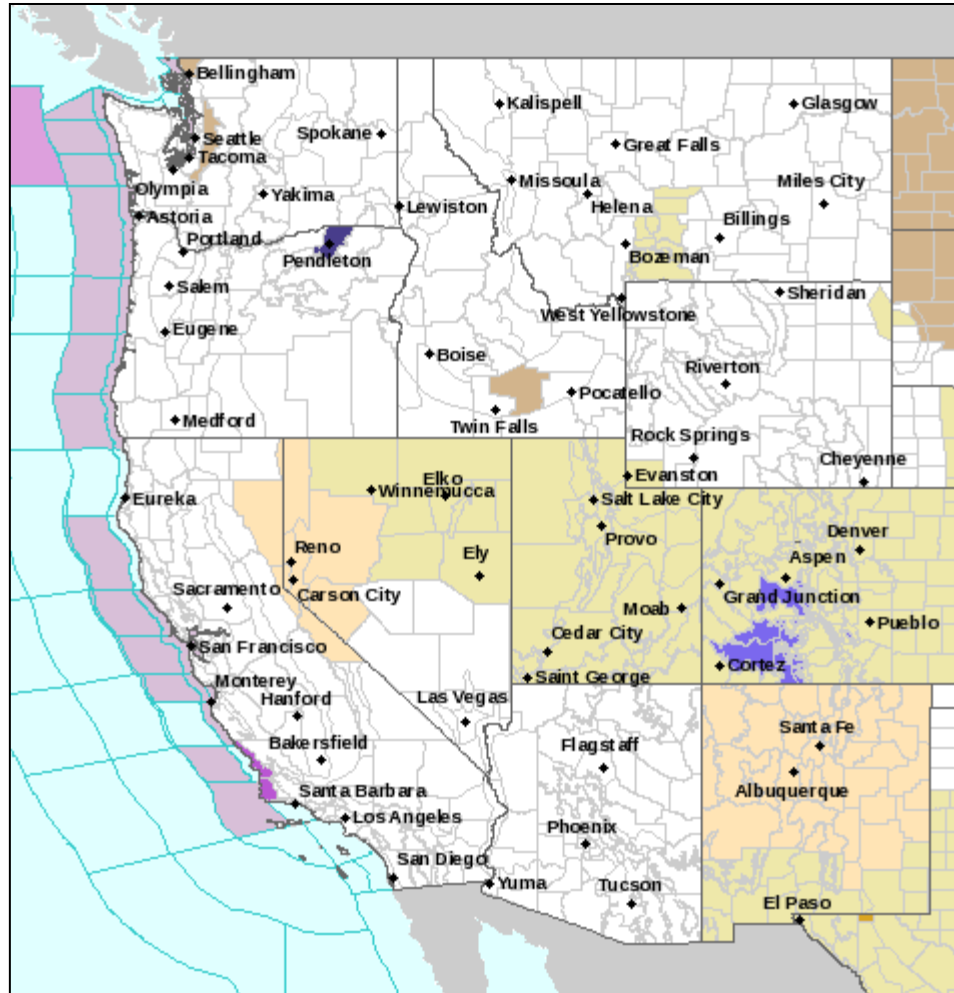

Afternoon highs will be 10-15 degrees above normal (80s warmest locations) into the middle of next week, then quickly drop to about 10 degrees below normal for Friday (near 60 warmest locations) and next Saturday. Low afternoon relative humidity (RH) in many areas (10-25%) and poor overnight RH recovery for some areas (20-35%) will continue through the middle of the week before RH shows some marked increase Thursday in most areas. Winds will be light through the middle of next week, then become more decisively southerly and increase both Thursday and Friday.

SOUTHERN CALIFORNIA

Dry and warm weather with high temperatures ranging from the upper 60s to mid 80s. [Winds 10 to 20 with gusts to 25 mph for mountain and desert locations](#).

An area of low pressure off the Central California coast will move across the region today, followed by a trough on Tuesday. As a result, much cooler weather can be expected over all the area with temperatures dropping to below normal levels. By today and tomorrow, most inland places will see highs in the 60s to low 70s which will be some of the coolest weather since May. The marine is expected to increase even further in the coming days with widespread night and morning low clouds spreading into the coastal slopes along with some local drizzle. Most areas west of the coastal ranges will have low clouds most of the day with some reverse clearing near the coast. Onshore flow will increase with breezy conditions developing during the afternoon and evening hours across the deserts. Temperatures will warm by a few degrees across the region by the middle to end of the week while little change is expected further north. A more significant trough will move into the state Friday and Saturday and will bring a chance of wetting rain to much of the central portions of the state by Friday afternoon and evening. Some precipitation will be possible south of Point Conception on Saturday but computer models are more uncertain about timing and amounts. Rainfall amounts across Central California are expected to be at least ½ inch or more with snow in the Sierra above 7,000 feet. Temperatures will remain near to slightly below normal through the extended period.
